

Dental Benefits That Go Further

Many studies have confirmed this important fact: There is an undeniable link between oral health and overall health. Gum disease and other related conditions may worsen diabetes, impact the health of pregnant mothers and their children, and increase the risk of cardiovascular disease.¹

That's why Guardian® wants to help employers promote oral care, keeping members healthy through an array of covered treatments that can be elected.

Adult Fluoride Treatments

Fluoride treatments are an integral step in keeping teeth healthy for decades.

Periodontal Treatments

Periodontal maintenance can be covered as a basic benefit with up to four cleanings a year, regardless of medical condition.

Dental Implants

Dental implants are quickly becoming a preferred procedure among dentists and patients, thanks to their ability to preserve healthy tooth structure.

Oral Cancer Screenings

Early detection of cancer warning signs can save a life. We're happy to provide Guardian members with covered screenings.

Insured Cosmetic Benefits

Periodontal maintenance can be covered as a basic benefit with up to four cleanings a year, regardless of medical condition.

Being in good company means never having to go without coverage.

We want to make sure our members have dental options available when they need them most. Even if a member reaches his/her annual maximum, cleanings may still be covered. For those who don't reach their maximum but visit a dentist during the year, a portion of any unused annual maximums may be rolled over for future use.
